

Preface:

Chinese-European Networking Symposium held in December 9-10, 2004 (Shanghai, China), which was a very successful meeting. More and more people wherever Chinese or European knew what is the EC-Bridge project and what kind of role they can make in this project.

Many Chinese and European institutes and organizations expressed their interests to cooperate with each other. In the time of meeting, we collected **36 copies of Shanghai Eol, including the below fields of**

- **Sciences;**
- **Industries;**
- **Astronomy;**
- **Agriculture;**
- **Forestry;**
- **Communication and Media;**
- **Education;**
- **Architecture;**
- **Water conservancy;**
- **Bioinformatics;**
- **Chemistry;**
- **Electric power;**
- **Materials;**
- **Music;**
- **Artists.**

Involving the below technologies and applications of

- **IPv6;**
- **Grid;**
- **PKI/PMI;**
- **NGI;**
- **Wireless LAN;**
- **Campus network;**
- **Flow-level traffic analysis in network;**
- **Data management an optimization;**
- **Distance education;**
- **e-Learning;**
- **Flow media;**
- **Electric commerce;**

Please see the below detail forms from No.1 to No. 36

1:

Expression of Interest Shanghai EoI 合作想法意见书

Date/日期: December 9, 2004

Ideas and project description/合作意向简要描述:

(Description of possible projects that parts are wishing to implement/简单描述可能的合作方向和项目)

Software College of ZJUT had developed some network application on **Grid-Based Security and PKI/PMI implements** in the Supply Chain Management. We hope that we can co-work with more research organizations in many interesting area related with these technologies.

Expression of Interest Shanghai EoI 合作想法意见书

Date/日期: December 6, 2004

Ideas and project description/合作意向简要描述:

Project I: CNGI (China Next Generation Internet running IPV6)

CNGI was officially initiated and funded in August of 2003 by SDPC (State Development Planning Commission) in cooperation with other 7 ministries. Total budget is 1.4 billion RMB. CNGI will build 39 backbone nodes (6 backbones by network operators in China, including 5 commercial operators) and 300 access networks running IPv6 in the coming 2 or 3 years. CNGI include network construction, key technology and application R&D, and application demonstration.

Project II: 6CDO (IPv6 EU-China Digital Olympics)

The main Goal of the 6CDO is to build a demo platform based on IPv6 which will be a showcase of how IPv6 can be implemented in the context of the 2008 Digital Olympics in China. 6CDO project has already been selected on April 28th by EU-China on Digital Olympics WG. It's an IST Project of European Commission and will be submitted in the framework of FP6 4th call on March 2005. At present, Chinese Partners include: France Telecom R&D Beijing Lab, CERNET, Institute of Computing Technology, Easteq Soft, BII Group Holding Ltd.. European Partners include: France Telecom R&D Division—Prime of the project, BCAMS (Business Coaching & Mentoring Services) (UK). University of Southampton (UK), University College London (UK), 6WIND (France). Other partners will join the project.

Cooperation direction:***Call for cooperation on IPv6 enabled application products and solution;***

We are a French research team based at the INRIA Sophia Antipolis on the French Riviera. Our current research interests focus on the **Grid and distributed computations**. We develop ProActive, a GRID middleware that features security, typed group communication, mobility... For more information, please visit our website at <http://proactive.objectweb.org>. Feel free to ask questions!

We are looking forward to partners to initiate collaboration with us. Collaboration can concern grid access exchange or extension of our middleware.

We are opened for all propositions around GRID!

(Description of possible projects that parts are wishing to implement/简单描述可能的合作方向和项目)

A network management platform addressed to solve new problems in managing an IPv4-IPv6 mixed campus network with mobile service support. Depends on recent network management technologies and our up-to date research results, it integrates in-depth traffic analysis with policy-based network configuration to burden new management tasks which traditional monitoring, securing & tracking, etc. It can also e adapted into both IPv4 and IPv6 network environment and provide tunnel monitoring functions.

(Description of possible projects that parts are wishing to implement/简单描述可能的合作方向和项目)

Prolog Middleware Project: this project is to develop a middleware based on Prolog to simplify web application architecture, especially database intensive application such as management information system. The key features would include:

- ***Predicate-granular multiply thread;***
- ***Persistency based on persistent facts and rational database;***
- ***Remote predicate call to support distributed application;***
- ***Simple user end languages (as simple as MS Excel), to isolate terminal user from prolog;***
- ***Function driven development of web application to gain quick response to requirements ;***
- ***Automatic compilation and deployment of application.***
